XM radio has started something extremely great for the commuters and people who work out of thier cars or trucks. This service that they provide is important to me and my work, I commute in the San Fransico bay area and it has helped in the planing of my daily routes to and from work. XM provides this service with very little to no commerical interference which mean, they only report whats important. The FCC or the government does'nt need to get involved due to the fact that I pay for prompt service!!!!
